

I Built \$10,000 AI Dental Websites in 8 Minutes (Clients Love This)

Transcrit par [TurboScribe](#). [Passez à Illimité](#) pour supprimer ce message.

An average dental practice in the states loses around \$15,000 to \$20,000 every month in patients who visit their website, but they think that the website is primitive and was made in 2009. And in the next eight minutes, I'm going to change that and I'll show you how to make this exact website, which you're seeing right here, using a single prompt with AI in one shot. So I hope this made sense.

This is an exceptionally high converting website, an exceptionally premium website. It took me, let's just say a while to build this out myself. And I'm going to give you the complete roadmap and blueprint on how to build this out.

Plus a small snippet on how you can actually sell this to businesses. That being said, this is how the website looks like. It just looks absolutely insane and it's completely customizable.

And again, and just to prove to you that dental practices are actually losing that much money. Here's the websites of the top five dental clinics that came up when I searched for dental clinics, USA, Florida, these, this is a website of the top five SEO ranking dental clinics, as you can see this one, this one, and this one. So again, they are decent.

They're not bad, but they're not, they're not high converting. And just to explain the math further, a lifetime value of a dental patient in the US is around \$2,000 to \$3,000. But where does the traffic come from? So the traffic comes up to 60 to 70% from Google search and SEO.

And just think about it. When was the last time you went to a dental clinic? Because you saw this ad on Facebook. It's very rare.

It hardly ever happens. So that's how it works. Right.

And then there's two options. When a person lands on a website, the website looks primitive. He moves on to a competitor and books appointment or walks in because the website converts or number one, the website just converts directly.

Right. So this is the main premise. And this is why you would be able to sell this website to businesses at an extreme ease because the top ranking businesses have websites like this, just to give you a standard of what we have built out and what they are currently running with.

And mind you, these businesses are printing. This market is fucking unsaturated because just think about it. The top ranking business has a website like this.

And maybe the reason why they don't want to change it is because they've never thought about it. They've never given, they're happy with the, they're happy with the lead flow. They're happy

with the customers they're getting.

And our job is to tell them how much more customers they could get if the website looked like this, because a website is a direct reflection of your business's status or a business's health. Like the more premium the website, the more premium your business appears to normal public and the more likely the person is to engage with you. That being said, this is the whole website as you could see.

I hope this makes sense. Now, let's get right into building without, without wasting any further time. So, so like always, you'll be getting this complete website prompt, this complete one-shot prompt right here.

You're getting this complete one-shot prompt from me in the description of this video. So you can just grab this whole website prompt right here. Now, that being said, you will ask Shreyas, how can I make this prompt? And the answer is you have to spend four to five hours building the original website like I've did right here.

And then you have to ask AI to give you a one-shot prompt. If you're willing to do that completely fine, but there's no magic trick to make a one-shot prompt for any business. That's how it works.

Right. That being said, let's quickly grab this one-shot prompt real quick. I'm just going to control C, just copy the whole thing that you can use any ID, like can use any coding ID.

So you can use antigravity. You can use, you can use cloud code. You can use cursor.

It doesn't really matter. If you guys want to roll with a free tier, just open antigravity and sign up for it. You can just download antigravity.

It's by Google. So you can just download it and you'll get it and you can just start using it for this particular project. Now, the sake of our project right now, what we'll be doing is we'll be using cloud code inside VS code.

So for this, you'll need a \$20 plan of cloud code. I am rolling with our max plan. So again, you can also go for that.

That being said, let's quickly go and open VS code on our computer. As you can see, our project is already open on my VS code. I'm just going to click on file, click on new window.

And then in here, I'm going to go to folders. So I'm going to go on the left sidebar, click on open folder. Let's create a new folder.

For example, let's name this as YouTube. So once you do this, click on open. Let's open the cloud code sidebar.

Let's give it the whole prompt and let's make sure it's under bypass permissions mode. So it

doesn't ask us for permissions. I'll make it very clear that do not ask me any questions.

Just make this whole website and locally deploy this. That's it. No questions asked.

Thanks. So we have sent to the prompt and now while it's making the website, I'll also like to add a disclaimer that the images you see on this website, right? The fun thing is that the image that you're seeing right here was also done by the AI and I did this using Magnific MCP. So I am a very big user, a very big supporter of Magnific.

So Magnific was formally free pick and I have a paid plan on this. So what you can do or what anyone can go ahead and do is connect an MCP. So you can connect an MCP model context protocol to cloud code so that cloud code can go ahead and generate images of its liking and then it plugs those images inside the website.

Now there's two ways in case you guys don't have Magnific MCP, what you guys can do instead is manually generate the images and then put them inside cloud code. It works as well. It's just a bit more tedious.

What I'm going to do right here is I'm just going to search for Magnific MCP. So open a new tab, search for Magnific MCP and then click on this API docs and here just copy the whole page and wherever you're getting. So here's where we're building a website.

While this is working on this, let's open another instance of cloud code. Let's paste the whole thing here and we'll just ask it to do OAuth for Magnific MCP. So I'm just going to ask it to do the OAuth for Magnific MCP.

It's going to revert back to me and it'll probably ask me to do the whole OAuth thing. So let's wait for that to complete. And while this is going on, in case you don't have an MCP or you don't have a paid plan on to Magnific, all you can do is you can just use Google Flow.

So Google Flow. You can use Google Flow, WISC. I think WISC has been discontinued.

You can use Google Flow. So go under Flow. And what you could do is when you're building this out, you can ask AI directly that give me a markdown file with all the images that I need to generate with the image prompt neatly structured so I can generate all the images which you require to build out this website.

At the same time, use stock images and free images for now. And once I bring you the images, you can attach those. So make me a document for that or make me a file for that.

Thank you. Just click on enter. So it's going to give me the prompt for the images which I need to generate.

And at the same time, let's actually go and grab this. So Magnific is already connected for me. So

as you can see, Magnific is already set up for me.

And I don't have to connect it. But usually, if you want to connect it, what you could simply need to do is it's going to ask you to go to a URL. You go to a URL, you open it into your computer, and that's it.

It's done. You come back, you tell Cloud Code that Magnific has been authenticated, and that's it. So now let's wait for the output to come around real quick.

So as you could see, our website has been completed. We are under YouTube Dental. Let's actually go and check out the website.

So this is a Teal version. This is a Teal version of the website. And yeah, it just looks absolutely insane.

Now, the reason why this is looking exactly the same is because what we're doing here is we're doing a git clone. And then we're just deploying this website. If you're on Windows, Mac, it's compatible for all of that.

And then from here on, it's your job to take this, change images and sell this to businesses or do demo with this website with other businesses. That's how it usually works in general. And this is how we've done it.

So you just have to, it's very simple, just put in the prompt and just let it run and you're going to get this. And then from here on, you can do your own changes and do your own thing. So I hope this made sense.

So this is the whole thing right here. And in case, if you want to generate images, as I said that I asked you to give me image prompts, in case you want to generate your own images, generate the images, give it to AI, and AI would put those images for you onto the website. So that's it.

I hope this made sense. And a way to sell this website is very simple. What I'll do if I was in a position, if I want to sell this as I would, let's just say, search up a dental clinic, let's just say a dentist in Florida.

And what I'll do is I'll rebrand this website onto the dentist's name, like whatever the current clinic name is, right? If you reach out to ex-dentist, then I'll rebrand this website into that ex-dentist's name. And then I'll send it to him as a free value. I'll be like, Hey, you know what? I've done this for you.

Would you like to explore this further? Or would you like to swap, would you like to purchase this? Would you like to swap it for your current website? And nine times out of 10, they'll say yes, because yeah, the website is just so much better. For example, this is Advanced Dentistry of Citrus County. So this is like a website, right? So our website is just so better that they'll just swap

the website in a heartbeat.

And then you can obviously come on a call and let them know here, here's the pricing. And you can easily charge \$2,000 to \$5,000 for these websites. I've personally done that.

I'm talking about personal experience. And here's how you make a fuck, here's how you do a dental website using AI under eight minutes and then sell it as well to businesses. I hope this made sense.

I hope also in case you guys want to learn more about selling and, you know, and if you want to actually run a successful AI business or agency, you can obviously join my paid community. This is an inner circle group with people who are all willing to learn and you'll be personally be mentored by me and we'll have live weekly calls. Plus you have my lectures on how to get clients, how to acquire clients, how to do sales.

It's all there. Again, you guys can visit it at your own, at your own free time. And in case you're a dentist or in case you're a local business owner who wants to get this done for yourself, just book a call to the RapidX AI team.

The calendar link would be in the description or in the bio or just go to rapidxai.com. You'll find my calendar link. I'll see you there. And yeah, we can do this for you at the best price.

Thank you. I hope this made sense. I hope you love the video.
